AUTHORSHIP STANDARDS AND PROCESS

Authors are requested to check the list, order, affiliation and address of authors before submit to the journal. If any changes in authorship like addition, deletion or rearrangement of author names should be made before acceptance of the paper if approved by the journal Editor. The corresponding author must contact the journal Editor, with confirmation of authors with the addition, removal or rearrangement of authors list.

The corresponding author must send request to Editor with following issues; (i) the main reasons for the change in the author list, (ii) the reasons for the change of the author’s affiliations, (iii) the reasons for the change of email contacts and (iv) written confirmation (e-mail, letter) from all authors that they agree with the addition, removal or rearrangement. The changes will be accepted by the editor before acceptance of the article, in only special situations the Editor will consider the addition, deletion or rearrangement of authors after the article has been accepted. Due to these considerations by the Editor, the article publication may be postponed.

The authors of IJEE should accurately illustrate who contributed to the work carried out and how they are contributed to the research work or in preparation of the article. All listed authors should qualify for authorship by standards that are appropriate for the scholarly community that the journal serves. IJEE suggest using the criteria developed by the International Committee of Medical Journal Editors, which provide below instructions for authors and can also be found online. This data has adopted from Welly/Best Practice Guidelines on Publishing Ethics.

✧ Journals should adopt clear authorship criteria, and explain these criteria in their instructions to authors.
✧ Journals should require authors to confirm that they and their co-authors all meet the journals criteria for authorship, and that nobody who meets these criteria has been omitted from the list.
✧ Journals should consider requesting that authors provide a short description of each author’s contribution in an Acknowledgment.
✧ Journals should request that contributions from anyone who does not meet the criteria for authorship are listed, with permission from the contributor, in an Acknowledgments section (for example, to recognize contributions from people who provided technical help, writing assistance, or a department chairperson who provided general support).
✧ Journals should ask corresponding authors to confirm they have received written authorization from all their co-authors for publication of the article. The Copyright Transfer Agreements and Exclusive License Agreements used by IJEE incorporate this.
✧ Journals should require that, prior to submitting their article, all authors agree the order in which their names will be listed in their manuscript.
✧ Journals should ask the corresponding author to ensure that all the journals administrative requirements, such as providing details of authorship, ethics committee approval, clinical trial registration documentation, and gathering conflict
of interest forms and statements, are properly completed.

✧ Journals should consider sending copies of all correspondence with the corresponding author to all listed authors. They should ensure as far as possible that emails are not returned because of invalid email addresses.

✧ Journals should encourage authors to use tools that remove potential ambiguity around author names, such as the unique persistent digital identifiers provided by ORCID.

Criteria for authorship

The International Committee of Medical Journal Editors provides definitions of authors and contributors that are applicable in many instances beyond medical publishing. It recommends that authorship should be based on the following four criteria:

1. Substantial contributions to the conception or design of the work; or the acquisition, analysis, or interpretation of data for the work; AND
2. Drafting the work or revising it critically for important intellectual content; AND
3. Final approval of the version to be published; AND
4. Agreement to be accountable for all aspects of the work in ensuring that questions related to the accuracy or integrity of any part of the work are appropriately investigated and resolved.

All those designated as authors should meet all four criteria for authorship, and all who meet the four criteria should be identified as authors. Those who do not meet all four criteria should be acknowledged. Authors collaborating on multidisciplinary and interdisciplinary work may have different and perhaps nonoverlapping areas of expertise. However, authors should still be able to stand “accountable” for ensuring investigation and resolution of “questions related to the accuracy or integrity of any part of the work.

By these criteria, acquisition of funding alone, collection of data alone, or general supervision of the research group alone does not constitute authorship. Also, each author should have participated sufficiently in the work to take public responsibility for appropriate portions of the content. This also applies to all authors designated within large multi-author groups and for on those occasions when authors report work on behalf of a larger group of investigators, upon which the International Committee of Medical Journal Editors provides guidance.

Journals should encourage authors of intercultural research to consider appropriate attribution for traditional knowledge, to the extent that this attribution does not compromise any agreed assurances of anonymity. This may include “traditional knowledge” notices, or citation of indigenous sources (such as people or community groups) or other cultural sources of knowledge by name within the text. In some fields, such as anthropology, appropriate attribution may require sharing authorship with intercultural collaborators and this may differ from the approach recommended by the International Committee of Medical Journal Editors. More information is at the Australian Institute of Aboriginal and Torres Strait Islander Studies web site.
