CONFLICT(S) OF INTEREST

International Journal of Earth Sciences and Engineering (IJEE) require that all authors disclose any potential sources of conflict of interest. If any financial, personal or other relationships with other people or organizations during the research work carried out. Authors must disclose the conflicts of interest, which directly or indirectly relevant to the work that the authors describe in their manuscript. Potential sources of conflict of interest includes but not limited to patent or stock ownership, membership of a company, board of directories, sponsored organizations, associated companies or organizations helped during the work, organizations data or lab facilities provided, membership of an advisory board or committee for a company, and consultancy or receipt of speakers fees from a company. The existed conflict of interest does not prevent the publication of article in this journal and if no conflicts of interest authors should declare at the submission.

The corresponding author has responsibility to review this policy with all authors and to collectively list in the cover letter to the Editor or Managing Editor, in the Acknowledgements section of the manuscript.

Editors, authors, and peer reviewers should disclose interests that might appear to affect their ability to present or review work objectively. These might include relevant financial interests (for example, patent ownership, stock ownership, consultancies, or speakers fees), or personal, political, or religious interests.

The International Committee of Medical Journal Editors definition of conflicts of interest is as follows:

“A conflict of interest exists when professional judgment concerning a primary interest (such as patients’ welfare or the validity of research) may be influenced by a secondary interest (such as financial gain). Perceptions of conflict of interest are as important as actual conflicts of interest.”

Strict policies preventing people with conflicts of interest from publishing might encourage authors to conceal relevant interests, and might therefore be counterproductive.

➢ Journal editors, board members, and staff who are involved with decisions about publication should declare their interests. Journals should consider publishing these on their website and updating them as required, as well as disclosing how conflicts of interest were managed for specific papers.
➢ Editors should clearly explain what should be disclosed, including the period that these statements should cover (for example, 3 years). Editors should ask authors to describe relevant funding, including the purpose of the funding (for example, travel grant and speakers fees), and to describe relevant patents, stocks, and shares that they own.
➢ Editors should publish author’s conflicts of interest whenever they are relevant, or a statement of their absence. If there is doubt editors should opt in favor of greater disclosure.
➢ If authors state that there are no conflicts of interest, editors should publish a confirmation to this effect.
➢ Editors should manage peer reviewers' conflicts of interest. An invitation to review a manuscript should be accompanied by a request for the reviewer to reveal any potential conflicts of interest and a request for the peer reviewer to disqualify or recuse themselves when these are relevant.
➢ When editors, members of editorial boards, and other editorial staff are presented with papers where their own interests may be perceived to impair their ability to make an unbiased editorial decision, they should withdraw from discussions, deputize decisions, or suggest that authors seek publication in a different journal.

IJEE always ask the authors to capture about conflicts of interest statements with many forms while submitting the manuscripts in online submission and peer review system. The International Committee of Medical Journal Editors has created a uniform disclosure form for conflicts of interest.
